Blue Bank | Remote Deposit Capture — Mobile Story Map

Fariza Arstanbek | 2 November 2026 | Customer goal: deposit a check safely from my phone and understand its outcome.

Read left to right for the journey; top to bottom for priority. Each release is cumulative. Offers are optional, never a prerequisite for depositing.

	BACKBONE	1. Get started	2. Authenticate	3. Understand accounts	4. Capture the check	5. Enter and validate	6. Review and deposit	7. Follow up and get help	8. Explore bank offers
	USER TASKS	Install and establish readiness	Access my bank identity	View balance; choose account	Prepare, front, back, retake	Amount, details, matching	Review, authorize, submit	Receipt, outcome, assistance	Browse optional promotions
R1	Essential release Complete safe deposit path, all 18(a-e) capabilities.	M01 Install on iPhone	M05 Use portal credentials	M09 See my accounts	M13 Prepare camera and check	M18 Enter check amount	M22 Review deposit summary	M26 Receive deposit acknowledgement	M31 See bank offers
		M02 Install on Android	M06 Use bank-approved alternative	M10 View and refresh balances	M14 Capture check front	M19 Complete required check details	M23 Confirm and submit e-check	M27 Check outcome and balance	M32 Open offer details
		M03 Install on Windows Phone	M07 End or lock my session	M11 Choose eligible destination	M15 Capture check back	M20 Match images to entered details	M24 Resolve interrupted submission	M28 Get help when needed	
		M04 Check RDC readiness			M16 Check quality; retake securely		M25 Handle duplicate or fraud alerts		
R2	Convenience release Builds on R1; reduces effort and follow-up.	No new story	M08 Enable biometric re-entry	M12 Remember a preferred account	M17 Use assisted camera capture	M21 Review suggested amount	No new story	M29 View deposit history	M33 Dismiss offers and set preferences
								M30 Opt into status notifications	
R3	Later option After R1/R2	No new story	No new story	No new story	No new story	No new story	No new story	No new story	M34 Choose personalized offers

M01-M34 link to the story catalogue and section-18 coverage matrix on the following pages. No dates or effort estimates are implied by release order.

Scope, releases and assumptions

Product: Blue Bank Remote Deposit Capture mobile app. Author: Fariza Arstanbek. The first landscape page is the story map: eight activities form the backbone, task cards refine the activities, and horizontal R1/R2/R3 slices prioritize stories below them. The 34 story IDs link the visual map to the catalogue and requirements matrix.

Primary persona: an existing Blue Bank customer with an internet-banking identity, a remote capture account, and an eligible deposit account who wants to avoid a branch/ATM visit. The app may guide a customer to existing enrollment support, but implementing portal account creation/update/deletion is outside this mobile scope.

Release outcomes

Release	User-visible outcome and rationale
R1 — Essential release	A customer on any of the three required platforms can authenticate, see balances, capture both check sides, enter details, select an account, resolve validation issues, submit securely and see bank acknowledgement/outcome. The bank can present offers without blocking deposits. All explicit section-18 functions are included, alongside essential error recovery and help.
R2 — Convenience release	Retain all R1 capability and reduce effort through opt-in biometric re-entry, preferred account selection, assisted capture, optional amount suggestions, deposit history, status notifications and promotion preferences. None replaces required R1 image/detail validation.
R3 — Later option	Retain R1/R2 and offer consent-based personalization of promotions. This is an optional assumption, not a dependency of deposit completion or an explicit case requirement.

Assumptions and scope decisions

A1. The bank supplies existing account enrollment/eligibility and account APIs. The mobile app guides users to those services; creating or deleting deposit accounts belongs to the portal scope in section 20, not this assignment.

A2. Portal credentials are supported, and the bank defines at least one alternative identity-check route for M06, such as an existing verified one-time-code process. Biometric re-entry in R2 is optional and must follow bank session policy; it is not a substitute for account verification.

A3. Secure capture uses protected temporary storage, protected transport, authorized access and bank-side duplicate/tamper/fraud checks. “Fraud-proof” is treated as the case’s protective intent, not a promise that any photograph can guarantee the absence of fraud; retry uses a stable submission reference and outcome lookup.

A4. Balances, eligibility, acceptance/rejection and clearing/availability statuses come from bank systems. A submission acknowledgement does not mean the check has cleared or that funds are immediately available; the app displays the status and refresh time it receives.

A5. The bank supplies mandatory check-field rules, image-quality/endorsement rules and image-versus-entered-detail validation. M20 validates the entered amount against the images in R1; optional R2 amount prefill only reduces typing and never removes verification.

A6. Offer content and support channels are maintained by existing bank services. The app displays offers/details and provides links or a telephone action to the existing 24/7 support service; a marketing authoring console and support staffing are not mobile-app features.

A7. All three platforms named in the fictional section 18(a), including Windows Phone, remain in the map and R1 scope. This is a case-study plan, not a claim that a current Windows Phone store or supported deployment toolchain is available; a real project would resolve platform feasibility with stakeholders before committing dates.

Out of scope: browser plug-in, IE/Firefox/Chrome/Safari compatibility, desktop scanner integration, scanner purchasing/hardware-vendor management, portal account administration, bank-side clearing implementation and a bank offer-authoring system. These are dependencies or other product workstreams, not mobile customer stories.

Section 18 coverage matrix and release checks

Case requirement	Stories	Coverage in R1
18(a): download on iPhone, Android and Windows Phone	M01-M03	One explicit platform story for each required phone family.
18(b): portal account or other authentication	M05-M07	Existing portal identity, bank-approved alternative, and safe session ending.
18(c): view account balances	M09-M10, M27	Account list, bank-provided balances, refresh information and outcome follow-up.
18(d): deposit checks into a deposit account	M11, M13-M27	Complete capture-to-acknowledgement path with recovery.
18(d)(i): secure front and back pictures	M13-M16, M25	Camera guidance, separate front/back capture, retake/privacy and bank fraud checks.
18(d)(ii): enter check details such as amount	M18-M19	Explicit amount and bank-required additional fields.
18(d)(iii): select destination account	M11, M22	Choose eligible destination and verify it in the summary.
18(d)(iv): validate images against entered details	M20, M22, M25	Validation is mandatory before final authorization; mismatch/quality errors lead to correction.
18(d)(v): deposit the e-check into the bank account	M23-M27	Secure bank submission, duplicate-safe outcome lookup, receipt and bank-reported result.
18(e): bank offers and promotions	M31-M32	View bank offers and their details; independent of deposit completion.

Representative R1 acceptance checks

1. Authenticate and deposit a valid check: install on the selected required platform, sign in, view a balance, choose an eligible account, capture front/back, enter amount, pass image/detail validation, review and submit once; receive a reference and bank-reported status.

2. Incorrect or poor-quality input: block submission for a missing side, unreadable image, invalid amount or image/amount mismatch; explain what to correct and allow retake/edit without losing a known bank outcome.

3. Interrupted submission: distinguish a request that was not sent from one whose result is unknown; look up the existing reference before another submission, and never show uncertain processing as a cleared deposit.

4. Cross-cutting protection: access requires a bank-authorized session; check images are not exported to the public gallery by default; failed bank validation does not display a success receipt.

5. Offers and support: show an offer and its conditions independently of the deposit journey; declining an offer must not prevent checking balances or depositing; help remains reachable when setup or capture fails.

6. Platform completeness: apply the core deposit-flow checks to iPhone, Android and the fictional Windows Phone target; do not silently substitute a browser/desktop workflow for a required mobile platform.

Release dependencies and ordering

R1 depends on bank identity, account/balance, check-validation and deposit-submission/status services. Validation and authorization precede final submission; receipt/status follow bank acknowledgement. Offers are an independent activity, so their rightmost placement means a separate opportunity in the customer experience, not a mandatory last deposit step.

R2 and R3 are cumulative increments, not dates or effort commitments. R1 includes all explicit mobile vision requirements; later releases contain enhancements inferred from convenience/privacy needs. The example SampleStoryMap uses an activity/task/story hierarchy, which this map extends with release slices and traceable story IDs.

Story catalogue — full user stories

Each map card below is a customer story with a concrete benefit. Section references identify case requirements; A references identify explicit assumptions. All releases retain earlier capabilities.

1. Get started — Install and establish readiness

M01 | R1 | Install on iPhone

As a Blue Bank customer, I want to download and install the iPhone app so that I can deposit checks from my iPhone.

Trace: 18(a)

M02 | R1 | Install on Android

As a Blue Bank customer, I want to download and install the Android app so that I can deposit checks from my Android phone.

Trace: 18(a)

M03 | R1 | Install on Windows Phone

As a Blue Bank customer, I want to download and install the Windows Phone app so that I can use the platform explicitly included in the case study.

Trace: 18(a)

M04 | R1 | Check RDC readiness

As a Blue Bank customer, I want to see account eligibility and setup guidance so that I know whether my existing remote capture account is ready.

Trace: 3-4; A1

2. Authenticate — Access my bank identity

M05 | R1 | Use portal credentials

As a Blue Bank customer, I want to sign in with my existing internet portal account so that I can use my established bank identity.

Trace: 18(b)

M06 | R1 | Use bank-approved alternative

As a Blue Bank customer, I want to use a bank-approved alternative identity check so that I can authenticate through another supported route.

Trace: 18(b); A2

M07 | R1 | End or lock my session

As a Blue Bank customer, I want to sign out and have an inactive session locked so that other people cannot view my banking information on the phone.

Trace: 5,11,15; A3

M08 | R2 | Enable biometric re-entry

As a Blue Bank customer, I want to opt into supported biometric re-entry after bank authentication so that I can return conveniently without weakening the bank session policy.

Trace: A2; optional

3. Understand accounts — View balance; choose account

M09 | R1 | See my accounts

As a Blue Bank customer, I want to view accounts associated with my bank identity so that I can identify the right account before depositing.

Trace: 18(c); A1

M10 | R1 | View and refresh balances

As a Blue Bank customer, I want to see bank-provided balances and their refresh time so that I can distinguish current information from stale information.

Trace: 18(c); A4

M11 | R1 | Choose eligible destination

As a Blue Bank customer, I want to select an eligible deposit account so that my check goes to the account I intend.

Trace: 18(d)(iii)

M12 | R2 | Remember a preferred account

As a Blue Bank customer, I want to choose a preferred deposit account while confirming it each time so that repeat deposits require fewer selections.

Trace: A4; optional

4. Capture the check — Prepare, front, back, retake

M13 | R1 | Prepare camera and check

As a Blue Bank customer, I want to receive camera-permission and endorsement guidance so that I can prepare a usable check image.

Trace: 18(d)(i); A5

M14 | R1 | Capture check front

As a Blue Bank customer, I want to capture a clear front image within the app so that the bank can read and validate the check face.

Trace: 18(d)(i)

M15 | R1 | Capture check back

As a Blue Bank customer, I want to capture a clear back image within the app so that the bank receives both required sides.

Trace: 18(d)(i)

M16 | R1 | Check quality; retake securely

As a Blue Bank customer, I want to preview and retake unreadable images and protect temporary copies so that I submit usable images without exposing them in my public photo gallery.

Trace: 18(d)(i),5; A3,A5

M17 | R2 | Use assisted camera capture

As a Blue Bank customer, I want to use edge detection and optional automatic capture so that I can take clearer images with less effort.

Trace: A5; optional

5. Enter and validate — Amount, details, matching

M18 | R1 | Enter check amount

As a Blue Bank customer, I want to enter the check amount explicitly so that the bank receives my intended deposit value.

Trace: 18(d)(ii)

M19 | R1 | Complete required check details

As a Blue Bank customer, I want to enter any additional check details required by bank policy so that my submission is complete before validation.

Trace: 18(d)(ii); A5

M20 | R1 | Match images to entered details

As a Blue Bank customer, I want to validate both images against my entered details and correct mismatches so that I do not submit an inconsistent amount or unreadable check.

Trace: 18(d)(iv)

M21 | R2 | Review suggested amount

As a Blue Bank customer, I want to review a suggested amount extracted from the image before accepting it so that I can reduce typing while retaining control of the declared amount.

Trace: A5; optional

6. Review and deposit — Review, authorize, submit

M22 | R1 | Review deposit summary

As a Blue Bank customer, I want to review the account, amount, images and bank-provided terms so that I can correct errors before authorizing submission.

Trace: 18(d)(ii-v); A5

M23 | R1 | Confirm and submit e-check

As a Blue Bank customer, I want to authorize one secure submission of the validated e-check so that the bank can receive and process my deposit.

Trace: 18(d)(v)

M24 | R1 | Resolve interrupted submission

As a Blue Bank customer, I want to check the outcome of an interrupted request before retrying so that I avoid accidentally submitting the same deposit twice.

Trace: 5,11; A3

M25 | R1 | Handle duplicate or fraud alerts

As a Blue Bank customer, I want to receive a clear bank validation result and next action so that a suspected duplicate or invalid check is not treated as a successful deposit.

Trace: 18(d)(i,iv-v); A3,A5

7. Follow up and get help — Receipt, outcome, assistance

M26 | R1 | Receive deposit acknowledgement

As a Blue Bank customer, I want to receive a deposit reference and bank-reported status so that I have evidence that the bank received my request.

Trace: 18(d)(v); A4

M27 | R1 | Check outcome and balance

As a Blue Bank customer, I want to refresh the bank-reported deposit outcome and account balance so that I can tell pending processing from funds made available.

Trace: 18(c,d)(v); A4

M28 | R1 | Get help when needed

As a Blue Bank customer, I want to open bank instructions or contact the existing support service so that I can recover from setup or deposit problems.

Trace: 7; A6

M29 | R2 | View deposit history

As a Blue Bank customer, I want to review prior deposit references and outcomes so that I can find a previous transaction without submitting it again.

Trace: A4; optional

M30 | R2 | Opt into status notifications

As a Blue Bank customer, I want to opt into notifications about deposit status changes so that I can learn of a bank decision without repeatedly opening the app.

Trace: A4; optional

8. Explore bank offers — Browse optional promotions

M31 | R1 | See bank offers

As a Blue Bank customer, I want to view current bank offers in the app so that I can discover relevant banking opportunities.

Trace: 18(e)

M32 | R1 | Open offer details

As a Blue Bank customer, I want to open offer conditions and the bank-approved next action so that I can decide whether to respond without interrupting a deposit.

Trace: 18(e); A6

M33 | R2 | Dismiss offers and set preferences

As a Blue Bank customer, I want to dismiss an offer or manage optional promotion settings so that I can keep the app focused on my banking task.

Trace: A6; optional

M34 | R3 | Choose personalized offers

As a Blue Bank customer, I want to opt into personalized offers with clear preferences so that I receive more relevant offers if I choose.

Trace: A6; optional
