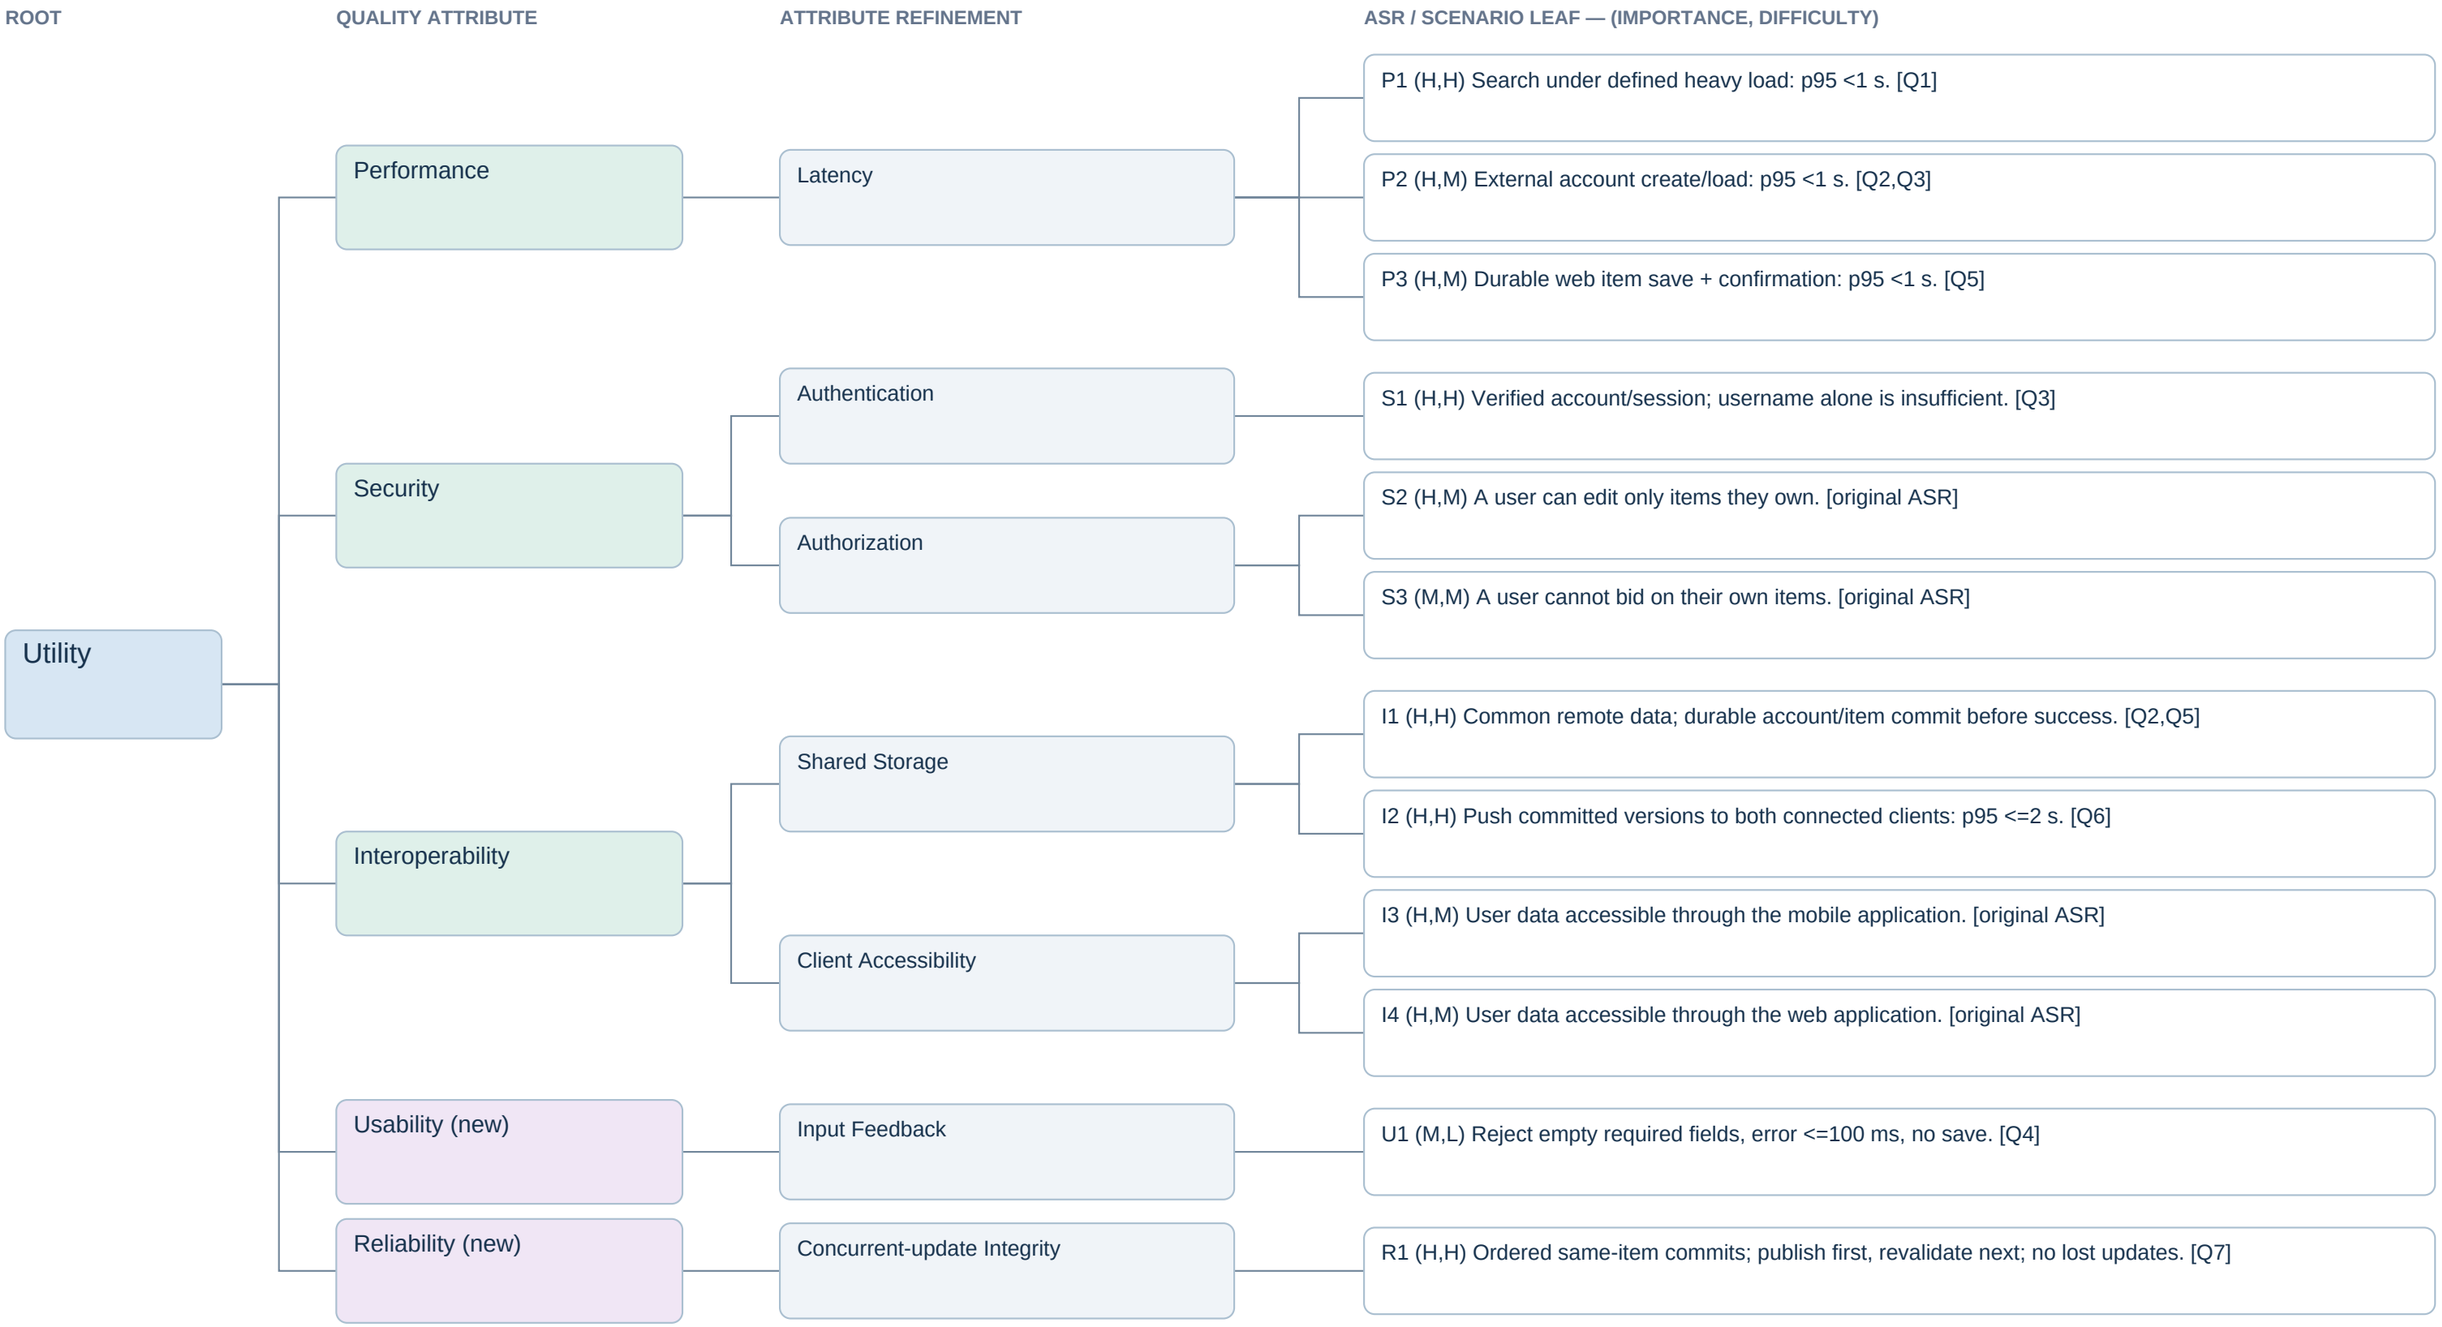
SharingApp — Updated ATAM Utility Tree

Fariza Arstanbek

Utility → Quality Attribute → Attribute Refinement → Architecturally Significant Requirement



Five changes: C1 latency refinement; C2 stronger authentication; C3 durable shared storage + push; C4 usability; C5 concurrency reliability.

H/M/L = high/medium/low; pairs = (business importance, estimated architectural difficulty). Targets are proposed, not measured results.

The companion evaluation defines normal/heavy load, measurement boundaries, priorities, all Q1-Q7 findings and source evidence.
